S/N 10/687,218

25. (Currently Amended) A method for comparing keyword strings on a wireless user device, the method comprising:

for each of at least one symbol in a language,

determining a relative frequency of use for the at least one symbol in a language;

assigning a statistical weighting to the at least one symbol based at least in part on a

relative frequency of use of the at least one symbol; and

assigning each of the at least one symbol to one of a plurality of groups;

comparing a first keyword string and a second keyword string based at least in part on

whether at least one symbol of the first keyword string is assigned to the same group as

at least one corresponding symbol of the second keyword string; and

presenting a result of the comparing to a user of the wireless user device.
